General Care of Diabetic Patients

Patients with Diabetes are often at higher risk for serious foot problems because of several factors, including reductions in circulation, nerve function, nutrition, and foot function. Even after these reductions are present, proper foot care dramatically reduces serious complications. Early care of problems prevents most from becoming serious. Good preventative care can often stop the problems from beginning. With diabetic foot care, an ounce of prevention is certainly worth more than a pound of cure.

Diabetic patients with foot problems are permitted by Medicare and most other insurance companies to be treated for routine needs every 9 weeks. For non-routine problems, such as pain, ulcers, infections, difficulty walking, or injuries, patients can be seen as much as is necessary.

According to the American Diabetes Association, patients with Diabetes without complications (such as problem with circulation or nerve function) should have a thorough foot examination each year. At such a visit we check for new or potentially serious problems with circulation, nerve function, foot structure, tendon/muscle flexibility, skin texture and function, corns or calluses (which are signs of structural problems), and even toe nails.

Patients are welcome to our practice for a thorough evaluation of the foot and leg even if they see another podiatrist for care of nails or callouses.

High Frequency of Help for Foot and Leg Symptoms of Diabetic Peripheral Neuropathy and Spinal Stenosis

Dr. Goldman performed an in-office study on a combination of new approaches for evaluation and management of patients presenting with lower extremity symptoms of Diabetic Peripheral Neuropathy. Results and concepts derived from this study and subsequent practice findings have been published in 5 articles and letters, (2003 -2008).

In his previous Florida practice it was found that the majority (over 50%) of the symptoms presented as diabetic peripheral neuropathy are treatable without oral medication or surgery. By combining approaches, some of which Dr. Goldman has published, some of which await publication, and others learned from other physicians, our practice successfully improved symptoms such as:

- Aching,
- Burning,
- Tingling,
- Numbness,
- Difficulty standing,
- Difficulty walking,
- Difficulty sleeping

because of foot and or leg discomfort in over one thousand (1000) patients in Florida and Maryland who presented with such symptoms previously thought of as untreatable.

Patient who improve are expected to improve within 2 days to 3 weeks, depending on the conditions present and the treatment provided.
Insurance information
Dr. Goldman participates with the following plans and their affiliates:
Medicare Medicaid Cigna
BC/BS Care First Lifebridge
Johns Hopkins EHP USFHP
Priority Partners Aetna PHCS
MultiPlan United First Health
Coventry MedStar Amerigroup
Jai Medical Bravo-ElderCare
Maryland Physicians Care
We will add plans, so call or check on our web site to see if your plan is added.

About Surgical Care
Skin conditions such as warts, ingrown nails, or skin growths are treated in our office.

Surgical correction of bunions, hammertoes, and other moderate conditions is usually performed as an outpatient, and usually performed under local anesthesia with IV sedation.

Major procedures are performed at a hospital, and may at times require overnight hospitalization. This will be coordinated with your medical specialist.

In almost all situations, surgery is reserved for people who cannot have relief of symptoms with non surgical care.

About the Doctor

Dr. Goldman began practicing in Baltimore in August, 2007.

Hospital Affiliations
1. Sinai Hospital
2. Northwest Hospital Center
3. Greater Baltimore Medical Center

Dr. Goldman has practiced as a Certified Mohel since 1993.

Philosophy of Practice
After 28 years of practicing podiatry, it is Dr. Goldman’s approach that “When there is pain, there is a reason.”

Dr. Goldman has extensive experience in investigating causes of foot, ankle, and leg pain. We strive to treat without surgery whenever possible, and our practice is aggressive in investigating, at times with non traditional approaches, ways to relieve symptoms without surgical treatment.

Conditions Treated
Our practice provides full service podiatric care, from basic treatment such as care for nails and calluses, to intermediate care such as arch supports, braces, injections, to surgical treatment of foot deformities.

We welcome patients with persistent symptoms despite other medical treatment to come in for evaluation and treatment.

- Fungus Nails
- Ingrown Nails
- Heel & Arch Pain
- Corns & Calluses
- Leg Cramps
- Foot Cramps
- Bunions
- Hammertoes
- Flat Foot
- Tendon Pain
- Diabetic Foot Care
- Burning Feet
- Fractures & Sprains
- Surgical Failures
- Morton’s Neuroma
- “Growing Pains”
- Peripheral Neuropathy
- Tarsal Tunnel Syndrome
- Childrens Foot Deformities
- Warts & other Skin Growths
- “Arthritis” of the Foot & Ankle
- Diabetic Peripheral Neuropathy
- Sleep Interference from Leg Pains
- Walking Limitations from Leg Pains
- Ulcers & Infections of the Foot & Ankle
- Foot and Leg Symptoms of Spinal Stenosis

Making an appointment
Patients are seen by appointment only.
In case of urgent need for an appointment (fracture, sprain, infection, or other acute problem), please call our office (410 235-2345) and we will try to see you that day.
